Subject Index

A

Abscisic acid
  early stages of genetic salt-stress responses, amphiploid, wheat and *Lophopyrum elongatum*, 257
  exogenous, cold acclimation mimicry, cacti differing in freezing tolerance, 871
  -induced cDNA from *Lycopersicon chilense*, sequence of, 301
  molecular responses, water deficit, 1035
  proline and, induction of chilling tolerance, suspension-cultured maize cells, 607
  -regulated tomato genes, drought-resistant species, *Lycopersicon pennellii*, 597
Acclimation, cold, cloning and sequencing of *cas17* cDNA, alfalfa, 667
Acer pseudoplatanus (*see* Sycamore)
Acetohydroxyacid synthase, phototoxicity of inhibitors, corn, 1221
Acetolactate synthase, imazaquin-resistant *Xanthium strumarium*, lack of cross-resistance, flumetsulam and chlorimuron, 281
Acetyl-coenzyme A carboxylase, inhibitors on root cell transmembrane electric potentials, graminicide-tolerant and -susceptible corn, 919
Acid invertase, gene expression, control of sugar composition, tomato fruit, 863
Acid reductoisomerase, -ketol, barley, 903
Acorus calamus, long-term anoxia tolerance, 441
Actinidia deliciosa (*see* Kiwifruit)
Adenosine diphosphate, ADP/ATP translocator, pea root plastids, 131
Adenosine triphosphatase, uncoating of, clathrin-coated vesicles, developing pea, 205
Albumins, radish and oilseed rape 2S, enhancement of antifungal activity, wheat and barley thionins, 1311
Alfalfa
  cloning and sequencing of cDNA, *cas17*, 667
  plant gene-controlled ineffective nodules, proteolysis, development and senescence, 379
  plant protein disulfide isomerase, expression and localization, 719
  Rhizobium meliloti-induced root nodules, invasion zone, gene that encodes proline-rich nodulin, 21
  transgenic, tolerance of freezing stress, superoxide dismutase, 1155
Algae, *Porphyra columbina*, floridoside, L- and D-isofloridoside, 485
Alkaline phosphatase, inactivation, casein kinase II-type protein kinase, pea cytoplasm, 955
Allantoinase, purification from soybean seeds, characterization, anti-allantoinase antibodies, 1235
Allophycocyanin, β subunit gene, *Cyanidium caldarium*, 293
Alternative oxidase protein, cyanide-resistant, covalent and noncovalent dimers, higher plant mitochondria, 845
Aluminum
  induction of five genes, wheat root, 855
  tolerance in wheat, 685, 695
Amaranthus hypochondriacus, seed, amino acid sequence, trypsin inhibitor, 1407
Amino acids
  acetohydroxyacid synthase inhibitors, phototoxicity, corn, 1221
  sequence of a trypsin inhibitor, Amaranth seed, 1407
2-Aminobutyrate, acetohydroxyacid synthase inhibitors, phototoxicity, corn, 1221
1-Aminocyclopropane-1-carboxylate oxidase, temporal and spatial regulation, pollination-induced senescence, orchid flowers, 31
1-Aminocyclopropane-1-carboxylate synthase, nucleotide sequence of cDNA clone, mustard, 1019
Ammonium, uptake by rice roots, 1249, 1259
α-Amylase, gene, nucleotide sequence, *Vigna mungo*, 149
Anabaena variabilis, ATCC 29413, dark heterotrophic growth conditions, content of photosystem II units, 971
Anoxia, long-term tolerance, *Acorus calamus*, 441
Apium graveolens (*see* Celery)
Apoproteins, synthesis, circadian oscillator, barley chloroplast development, 191
Apple
  cDNA
    clone for flavanone 3-hydroxylase, 291
    homology to *Antirrhinum Candica*, *Zea A2* genes, 1015
  gene highly expressed in fruit, 1017
Appressorium, formation in *Colletotrichum gloeosporioides*, chemical signals, avocado surface wax, 267
Aquatic plants, long-distance water transport, 1369
Arabidopsis thaliana
  blue and red light and nuclear gene expression, chloroplast glyceraldehyde-3-phosphate dehydrogenase, 1115
  cDNA
    33-kDa laminin receptor analog, 299
    sequence encoding myrosinase, 671
  cloning, plant ω-3 fatty acid desaturases, 467
  differential involvement of circadian clock, Rubisco synthesis, assembly and activation, 553
  leaf, alteration of β-tubulin gene expression, low-temperature exposure, 371
  Lhcb4 gene, nucleotide sequence, 1451
  lipoxygenase gene, response to methyl jasmonate, wounding, 1133
  modulation of gravitropism, red-absorbing form of phytochrome B, 15
  molecular characterization of PAB2, poly(A)-binding proteins, 525
  mutant
    disruption, pollen tube and root-hair tip growth, 977
    reduced response to fusicoccin, 165
  osmoregulation, pyrroline-5-carboxylate reductase gene, 771
  phytoene desaturase, 1475
  regulation in response to low temperature, 1047
  seedling, growth distribution during phototropism, 157
  suspension cultures, oxidative stimulation, glutathione synthesis, 621
Arabinogalactan, hydroxyproline deficiency, protein secretion, suspension-cultured carrot cells, 115
Arginine decarboxylase, cloning of tomato gene, expression during fruit ripening, 829
Ascorbate peroxidase
  overexpression of superoxide dismutase, protection of plants from oxidative stress, 1067
  soybean root nodules, 661
Asparaginase synthetase, ectopic overexpression, transgenic tobacco, 1285
Atrazine, resistance, serine-to-threonine substitution, potato cells, 911
Atriplex nummularia, glycophyte and halophyte, NaCl regulation, plasma membrane H^+-ATPase gene expression, 713
Auxin
  -dependent pH changes, coleoptile cell walls of corn and oat, null-point method, 351
  maize endosperm development, 273
Avena sativa (*see* Oat)
Avocado
  fruit and mesocarp discs, preclimacteric phase, ethylene and wound-induced gene expression, 227
  ripening-related polygalacturonase cDNA, 289
  surface wax chemical signals, germination and appressorium formation, *Colletotrichum gloeosporoides*, 267

B

Bacteria, induction of hypersensitive reaction, water relation alterations, cotton, 1243
Barley
  apparent induction of nitrate uptake, NO_3^--selective microelectrodes, 885
  chloroplast development, synthesis of apoproteins and pigments, circadian oscillator, 191
  ketol-acid reductoisomerase, 903
  pathogenesis-related proteins, fungal cell wall lytic activity, inhibition of yeast growth, 1277
  purification and properties, monofunctional imidazoleglycerol-phosphate dehydratase, wheat, 733
  thionins, enhancement of antifungal activity, radish and oilseed rape 2S albumins, 1311

Beet, leaf, effect of cutting, solute uptake by plasma membrane vesicles, 49
Benzoic acid, salicylic acid biosynthesis, pathway, healthy and virus-inoculated tobacco, 315
Benzoic acid 2-hydroxylase, induction, virus-inoculated tobacco, 323
Beta vulgaris (*see* Beet)
Boron, effects on proton transport, membrane properties, sunflower cell microsomes, 763
Bradyrhizobium japonicum, kinetics of nodule development, *Glycine soja*, 1139
Brassica, effects of inhibitors, protein serine/threonine phosphatases, pollination, 1165
Brassica juncea (*see* Mustard)
Brassica napus (*see* Rape)
Brassica oleracea (*see* Cabbage)
Broad bean
  circadian rhythms, stomatal responsiveness, red and blue light, 399
  guard cell phospho*enol*pyruvate carboxylase, interactive effects of pH, L-malate and glucose-6-phosphate, 1189
Bundle sheath cells, conductance in C_4 species, O_2 insensitivity of photosynthesis, 1183

C

Cabbage, purification and properties, monofunctional imidazoleglycerol-phosphate dehydratase, wheat, 733
Cacti, freezing tolerance, mimicry of cold acclimation, exogenous abscisic acid, 871
Caffeine, threobromine biosynthesis, separate *de novo* and salvage purine pools, *Coffea arabica* leaves, 1203
Calcium
  ability to immunolocalize calmodulin, cortical microtubules, carrot and tobacco, 543
  cytosolic, regulation of, 7
  influx and 4-hydroxybenzoic acid synthesis, elicitor-induced changes, carrot protoplasts, 407
  pump activation in plasma membrane, controlled proteolysis, radish, 385
  -requiring plasma membrane kinases, zucchini, 413
  -sodium salinities, kinematics and dynamics, sorghum leaf development, 1107
Callose synthase, *in vitro* synthesis of cellulose, 307
Callus
  embryonic, sorbitol as primary carbon source, 1339
  tobacco tissue cultures, biochemical basis of resistance, hydroxyphenylethylamines, 329
Calmodulin
  activation of plasma membrane Ca^{2+} pump, controlled proteolysis, radish, 385
  immunolocalization to cortical microtubules, calcium levels, carrot and tobacco, 543
Camptotheca acuminata, 3-hydroxy-3-methylglutaryl coenzyme A reductase, differential regulation, wounding and methyl jasmonate, 41
Capsicum annuum (*see* Pepper)
Carbon
  primary source, sorbitol, growth of embryonic callus of maize, 1339
  sources, mannitol 1-oxidoreductase activity, celery suspension cultures, 1001
Carbon dioxide
  ambient concentration, growth and nitrogen use, Rubisco in tobacco, 1075
  exchange growth, open-top chambers, *Opuntia ficus-indica*, 519
  oxygen exchange and, concurrent measurements, lightflecks in maize, 823
Carbonic anhydrase, internal and external isozymes, *Chlorella saccharophila*, 943
Carotenoids, flavonol glycosides and, protection from ultraviolet-B damage, soybean, 741
Carrot
  ability to immunolocalize calmodulin to cortical microtubules, calcium levels, 543
  embryogenic and nonembryogenic cells, differential expression of cDNA, 1021
  protoplasts, elicitor-induced changes, ions and 4-hydroxybenzoic acid synthesis, 407
  suspension culture
    changes in phosphatidylinositol metabolism, response to hyperosmotic stress, 637
    hydroxyproline-deficient arabinogalactan protein secretion, 115
  xyloglucan endotransglycosylase activity, cell elongation, somatic embryogenesis, 987
Casein kinase II, -type protein kinase, inactivation by alkaline phosphatase, pea cytoplasm, 955
Castor, activation of cytosolic pyruvate kinase, polyethylene glycol, 285
Catalase, purification and characterization, loblolly pine megagametophytes, 477
Cathepsin D, inhibitor protein, nucleotide sequence, tomato, 1473
Cations, effective permeability to sulfuric acid, pear leaf cuticles, 251
Cavitation, intracellular ice formation and, supercooling wood tissue, *Cornus florida*, 753
Celery, suspension cultures, different carbon sources, mannitol 1-oxidoreductase activity, 1001
Cellulose, *in vitro* synthesis in plants, 307
Cell wall
  coleoptile, auxin-dependent pH changes, corn and oat, 351
  lytic activity, inhibition of yeast growth, barley pathogenesis-related proteins, 1277
  metabolism in ripening fruit, transgenic tomato, 429
  oligosaccharides as signals and substrates, 1
  suspension-cultured plant cells, *O*-D-galacturonoyl esters, pectic polysaccharides, 933
  xyloglucan endotransglycosylase, kiwifruit ripening, 1399
Chara buckelli, membrane depolarization and conductance increase, high-salt conditions, passive proton conductance, 197
Chickpea, cloning of class III acidic chitinase, 297
Chitinase
  class I, chitin binding in tobacco, N-terminal cysteine-rich domain, 221
  class III acidic, cloning of, chickpea, 297
Chlorella saccharophila, internal and external isozymes, carbonic anhydrase, 943
Chlorella vulgaris, α-tubulin gene, nucleotide sequence, 1467
Chlorimuron, lack of cross-resistance, imazaquin-resistant *Xanthium strumarium* acetolactate synthase, 281
Chlorophyll
  expression, temperature-sensitive mutants, sweetclover, 1123
  -protein complex, iron-deficient *Synechococcus*, encoding by *isiA* gene, 893
Chlorophyll *a*/*b*-binding protein, light-harvesting gene, light-dependent chloroplast development, *Ginkgo biloba*, 727
Chloroplasts
  barley, synthesis of apoproteins and pigments, circadian oscillator, 191
  Dunaliella tertiolecta, two isoforms, dihydroxyacetone phosphate reductase, 243
  glyceraldehyde-3-phosphate dehydrogenase, blue and red light, *Arabidopsis thaliana*, 1115
  lettuce, dithiothreitol effects, nonphotochemical fluorescence quenching, 575
  light-dependent development, light-harvesting chlorophyll *a*/*b*-binding protein gene, *Ginkgo biloba*, 727
  -localized porphobilinogen deaminase, PCR, pea, 139
  pea, zinc protease EP1, Rubisco degradation, 585
  photosystem II reaction center, damage and repair, *Dunaliella salina*, 181
  rape
    glutamine synthetase, 303
    sequence, fructose-1,6-bisphosphate, 1453
  spinach
    ADP/ATP translocator, pea root plastids, 131
    sequence, mature phosphoglycerate kinase, 1449
  transcription, dynamic regulation, 309
Choline, synthesis in spinach, relation to salt stress, 1269
Cicer arietinum (*see* Chickpea)
Cinnamic acid, salicylic acid biosynthesis, pathway, healthy and virus-inoculated tobacco, 315
Cinnamyl alcohol dehydrogenase, nucleotide sequence of cDNA, *Eucalyptus*, 1447
Circadian rhythms
  differential involvement in *Arabidopsis thaliana*, Rubisco synthesis, assembly and activation, 553
  stomatal responsiveness, red and blue light, broad bean, 399
Citrus grandis, juvenile-specific localization and accumulation, rhamnosyltransferase, its bitter flavonoid, 1377
Cladosporium fulvum, AVR9 race-specific elicitor, processing by endogenous and plant proteases, 91
Clathrin, -coated vesicle uncoating, uncoating of ATPase, developing pea, 205
Clover, white, current nitrogen fixation, regulation, nitrogenase activity, 1009
Coffea arabica
  intact leaves, regulation, purine metabolism, 1195

leaf, separate *de novo* and salvage purine pools, threobromine biosynthesis, 1203
Cold
acclimation, mimicry by exogenous abscisic acid, cacti differing in freezing tolerance, 871
acclimation and freezing tolerance, plasma membrane lipids, genetic variability in *Solanum* species, 793
Coleoptiles
cell walls of corn and oat, auxin-dependent pH changes, 351
oat, role of expansin, cell enlargement, 1321
Colletotrichum gloeosporioides, germination and appressorium formation, chemical signals, avocado surface wax, 267
Conyza bonariensis, paraquat-resistant, developmental variability, photooxidative stress tolerance, 1097
Copper, -Zn-superoxide dismutases, molecular responses to photooxidative stress, *Pinus sylvestris*, 1385
Corn
A2 genes, *Malus* cDNA, homology to *Antirrhinum Candica*, 1015
auxin-dependent pH changes, coleoptile cell walls, null-point method, 351
C_4 photosynthesis, 83
endosperm development, role of auxin, 273
graminicide-tolerant and -susceptible, acetyl-coenzyme A carboxylase inhibitors, root cell transmembrane electric potentials, 919
growth of embryonic callus, sorbitol as primary carbon source, 1339
lightflecks, concurrent measurements, oxygen and carbon dioxide exchange, 823
phototoxicity, acetohydroxyacid synthase inhibitors, 1221
purification and properties, monofunctional imidazoleglycerol-phosphate dehydratase, wheat, 733
root
penetration by artificial electron acceptors, plasma membrane-bound redox system, 593
transpiration, radial turgor pressure gradients, 493
transport of water and solutes, puncturing of endodermis, 335
suspension cells, paraquat transport, protoplasts, 963
suspension-cultured cells, induction of chilling tolerance, proline and abscisic acid relationship, 607
Cornus florida, intracellular ice formation and cavitation, freezing injury, supercooling wood tissue, 753
Cotton, hypersensitive reaction induced by bacteria, water relation alterations, 1243
Cotyledons, hydroxypyruvate reductase gene expression, light fluence and wavelength, cucumber, 933
Crassulacean acid
metabolism in *Xerosicyos*, severe water stress, 1089
salt stress perceptions, plant growth regulators, *Mesembryanthemum crystallinum*, 1299
C_4 species, O_2 insensitivity of photosynthesis, bundle sheath cell conductance, 1183
Cucumber, hydroxypyruvate reductase gene expression, light fluence and wavelength, 933
Cucumis sativus (*see* Cucumber)
Curcubito pepo (*see* Squash, Zucchini)
Cyanide, -resistant alternative oxidase protein, covalent and noncovalent dimers, higher plant mitochondria, 845
Cyanidium caldarium, allophycocyanin β subunit gene, 293
Cyanobacteria
Anabaena variabilis ATCC 29413, dark heterotrophic growth conditions, content of photosystem II units, 971
Synechococcus, PsaE requirement, electron flow around photosystem I, 171
Cystatin, functional domains in potato, proteolysis, 85-kDa cystalline cysteine proteinase inhibitor, 1227
Cysteine, -rich domain of tobacco, class I chitinase, chitin binding, 221
Cysteine proteinase, 85-kDa crystalline inhibitor, proteolysis, potato, 1227
Cytochrome, alternative pathway respiration and, tobacco, 877
Cytochrome *c* reductase, integrated processing peptide, metalloendoproteases, potato mitochondria, 615
Cytokinin, role of auxin, maize endosperm development, 273
Cytokinins, biochemical basis of resistance, hydroxyphenylethylamines, tobacco callus tissue cultures, 329
Cytoplasm, pea, casein kinase II-type protein kinase, inactivation of alkaline phosphatase, 955
Cytosol
activation of pyruvate kinase, polyethylene glycol, castor, 285
calcium, regulation of, 7

D

Daucus carota (*see* Carrot)
Daylily, ephemeral flower, fructan hydrolysis, petal expansion, 213
Dehydrin, -like protein, nucleotide sequence of cDNA, *Stellaria longipes*, 1029
Density gradient, victorin-binding proteins, oat, 67
Diatoms, *Skeletonema costatum*, nitrate reductase, 1437
Dihydroxyacetone phosphate reductase, two isoforms, *Dunaliella tertiolecta* chloroplasts, 243
Disulfide isomerase, plant protein, expression and localization, alfalfa, 719
Dithiothreitol, effects on nonphotochemical fluorescence quenching, intact chloroplasts, lettuce, 575
DNA
nuclear, role of auxin, maize endosperm development, 273
replication-dependent histone H2A mRNA expression, pea root tips, 1291
Rubisco antisense, rate limitation of photosynthesis under water stress, transgenic tobacco, 629
DNA, complementary
Arabidopsis, 33-kDa laminin receptor homolog, 299
clone encoding short-chain alcohol dehydrogenase, Norway spruce, 1479
clone for flavanone 3-hydroxylase, apple, 291
cloning and gene expression, soluble starch synthase, immature rice seeds, 565
differential expression, embryogenic and nonembryogenic carrot cells, 1021
EPI12, epidermis-specific transcripts, 677
glucose transporter, sugarcane, 1469
24-kDa light-harvesting protein, photosystem I, pea cDNA clone, 1461
Malus, homology to *Antirrhinum Candica*, *Zea A2* genes, 1015
manganese-superoxide dismutase, cloning and sequence analysis, rice, 1477
molecular cloning and characterization, tracheary element differentiation, cultured *Zinnia* cells, 815
nucleotide sequence
cinnamyl alcohol dehydrogenase, *Eucalyptus*, 1447
dehydrin-like protein, *Stellaria longipes*, 1029
precursor of Rubisco small subunit, *Pteris vittata*, 1455
pepper severe mosaic virus coat protein gene, 1023
phospho*enol*pyruvate carboxylase, sequence, soybean, 1025
random root clones of rape, generation of expressed sequence tags, single-run partial sequencing, 359
ripening-related polygalacturonase, avocado, 289
sequence
chloroplast fructose-1,6-bisphosphate, rapeseed, 1453
soybean alternative oxidase, 1481
sequence encoding myrosinase, *Arabidopsis thaliana*, 671
sequence of (1–3,1–4)-β-glucanase, oat, 295
tomato fruit sucrose synthase, 1463
tropinone reductase II, *Hyoscyamus niger*, 1465
wheat, plastid-localized heat-shock protein, 675
Dunaliella salina, damage and repair, photosystem II reaction center, 181
Dunaliella tertiolecta, chloroplasts, two isoforms, dihydroxyacetone phosphate reductase, 243

E

Electrons
allocation of nitrogenase, model of regulation, legume nodules, 421
artificial acceptors, plasma membrane-bound redox system, corn root, 593
changes in P-700 oxidation, early stages, induction of photosynthesis, 649
flow and photosystem I, PsaE requirement, *Synechococcus*, 171
Elicitor
-induced changes in Ca^{2+} influx and K^+ efflux, 4-hydroxybenzoic acid synthesis, carrot protoplasts, 407
induced ortho-diphenol-*O*-methyltransferases, molecular cloning and expression, tobacco leaves, 509
Elongation, cell, xyloglucan endotransglycosylase activity, carrot cell suspensions, 987
Embryo, callus of maize, growth, sorbitol as primary carbon source, 1339
Embryogenesis, somatic, xyloglucan endo-

transglycosylase activity, carrot cell suspensions, 987
Endodermis, puncturing of, water and solute transport, maize roots, 335
Endoplasmic reticulum, expression and localization, plant protein disulfide isomerase, alfalfa, 719
Endosperm, development in maize, role of auxin, 273
Enzymes
cyanide-resistant alternative oxidase protein, covalent and noncovalent dimers, higher plant mitochondria, 845
radish root and leaf, ferredoxin-$NADP^+$ oxidoreductase isoenzymes, antibodies, 435
Epidermis, -specific transcripts, EPI12, 677
Escherichia coli, protein homolog, genomic nucleotide sequence of gene, *Arabidopsis thaliana*, 673
Ethylene
submergence-induced synthesis, flooding resistances, *Rumex palustris* and *R. acetosa*, 783
wound-induced gene expression and, preclimacteric phase, avocado fruit and mesocarp discs, 227
Eucalyptus, nucleotide sequence of cDNA, cinnamyl alcohol dehydrogenase, 1447
Expansin, role in cell enlargement, oat coleoptiles, 1321

F

Fatty acid desaturases, ω-3, cloning of, *Arabidopsis thaliana*, 467
Fatty acid synthase, 3-ketoacyl-acyl carrier protein synthase III, spinach, 1361
Ferns, *Pteris vittata*, nucleotide sequence of cDNA clone, precursor of Rubisco small subunit, 1455
Ferredoxin, -$NADP^+$ oxidoreductase isoenzymes, antibodies, radish root and leaf enzymes, 435
Flavanone, 3-hydroxylase, cDNA clone, apple, 291
Flavonoid, rhamnosyltransferase, juvenile-specific localization and accumulation, *Citrus grandis*, 1377
Flavonol glycosides, carotenoids and, protection from ultraviolet-B damage, soybean, 741
Flooding, resistances in *Rumex palustris* and *R. acetosa*, submergence-induced ethylene synthesis, 783
Floridoside, L- and D-isofluoridoside, *Porphyra columbina*, 485
Flower
daylily, fructan hydrolysis, petal expansion, 213
orchid, pollination-induced senescence, 1-aminocyclopropane-1-carboxylate oxidase, 31
tobacco, ectopic expression of *NAG1*, conversion of perianth into reproductive organs, 1041
Flumetsulam, lack of cross-resistance, imazaquin-resistant *Xanthium strumarium* acetolactate synthase, 281
Fluorescence, nonphotochemical quenching, dithiothreitol effects, intact lettuce chloroplasts, 575
Freezing
stress, tolerance and superoxide dismutase, transgenic alfalfa, 1155
tolerance, mimicry of cold acclimation, exogenous abscisic acid and cacti, 871
tolerance and cold acclimation, plasma membrane lipids, genetic variability in *Solanum* species, 793
Fructan, hydrolysis and petal expansion, ephemeral daylily flower, 213
Fructose-1,6-bisphosphate, rapeseed chloroplasts, sequence, 1453
Fruit, tomato, ripening, cell wall metabolism, 429
Fungi, cell wall lytic activity, inhibition of yeast growth, barley pathogenesis-related proteins, 1277
Fusicoccin
mimicry by controlled proteolysis, plasma membrane H^+-ATPase, radish, 391
reduced response, mutant *Arabidopsis thaliana*, 165

G

Galactose, -specific lectins, protection from freeze-thaw damage, spinach thylakoids, 59
O-D-Galacturonoyl esters, peptic polysaccharides, suspension-cultured plant cells, 933
Gene
acid invertase, control of sugar composition, tomato fruit, 863
allophycocyanin β subunit, *Cyanidium caldarium*, 293
α-amylase, nucleotide sequence, *Vigna mungo*, 149
antisense polygalacturonase, cell wall metabolism in ripening fruit, transgenic tomato, 429
apple, high expression in fruit, 1017
atp9 transcript, RNA editing, soybean mitochondria, 1457
AVR9 race-specific elicitor, *Cladosporium fulvum*, processing by endogenous and plant proteases, 91
cas17, cloning and sequencing of cDNA, alfalfa, 667
cDNA cloning and, soluble starch synthase, immature rice seeds, 565
chloroplast transcription, dynamic regulation, 309
-controlled ineffective alfalfa nodules, proteolysis, development and senescence, 379
drought- and abscisic acid-regulated, drought-resistant species, *Lycopersicon pennellii*, 597
ethylene and wound-induced expression, preclimacteric phase, avocado fruit and mesocarp discs, 227
expression, molecular responses, water deficit, 1035
expression patterns, tracheary element formation, single mesophyll cells of *Zinnia elegans*, 805
genomic sequence, protein homolog of *Escherichia coli*, *Arabidopsis thaliana*, 673
glutamine synthetase, differential expression, *Medicago truncatula*, 73
3-hydroxy-3-methylglutaryl coenzyme A reductase, wounding and methyl jasmonate, *Camptotheca acuminata*, 41
hydroxypyruvate reductase, light fluence and wavelength, cucumber, 933
induction by aluminum, wheat root, 855
isiA, chlorophyll-protein complex, iron-deficient *Synechococcus*, 893
lectin, sequence of vegetative homolog, pea seed, 663
Lhcd4, nucleotide sequence, *Arabidopsis thaliana*, 1451
lipoxygenase, response to methyl jasmonate and wounding, *Arabidopsis thaliana*, 1133
long-term anoxia tolerance, *Acorus calamus*, 441
modulation of gravitropism in *Arabidopsis thaliana*, red-absorbing form of phytochrome B, 15
myrosinase, differential expression, rape, 703
nuclear, chloroplast glyceraldehyde-3-phosphate dehydrogenase and blue and red light, *Arabidopsis thaliana*, 1115
PAB2 characterization, poly(A)-binding proteins, *Arabidopsis thaliana*, 525
phytochrome, functions, 679
plasma membrane H^+-ATPase, NaCl regulation, glycophyte and halophyte, 713
polygalacturonase, kiwifruit, 669
proline-rich nodulin, invasion zone, *Rhizobium meliloti*-induced alfalfa root nodules, 21
regulation of *Arabidopsis thaliana cor78*, response to low temperature, 1047
stress-induced *ESI35*, *Lophopyrum elongatum*, 1031
tobacco floral homeotic *NAG1*, ectopic expression, conversion of perianth into reproductive organs, 1041
α-tubulin
low-temperature exposure, *Arabidopsis thaliana* leaves, 371
nucleotide sequence, *Chlorella vulgaris*, 1467
variability in *Solanum* species, plasma membrane lipids, freezing tolerance and cold acclimation, 793
Zea A, *Malus* cDNA, homology to *Antirrhinum Candica*, 1015
Germination
appressorium formation and, chemical signals from avocado surface wax, *Colletotrichum gloeosporioides*, 267
soybean embryonic axes, oxidative stress, α-tocopherol, 949
Gibberellic acid, xyloglucan endotransglycosylase activity, pea internodes, 235
Ginkgo biloba, light-dependent chloroplast development, light-harvesting chlorophyll *a*/*b*-binding protein gene, 727
(1→3,1→4)-β-Glucanase, cDNA from oat, sequence of, 295
Glucosamine, oligosaccharides as signals and substrates, plant cell wall, 1
Glucose, transporter cDNA from sugarcane, 1469
Glucose-6-phosphate, pH and L-malate, guard cell phospho*enol*pyruvate carboxylase, *Vicia faba*, 1189
Glutamine synthetase
gene family, differential expression, *Medicago truncatula*, 73
rape chloroplasts, 303
Glutathione, oxidative stimulation of synthesis, *Arabidopsis thaliana* suspension cultures, 621
Glutathione reductase, molecular responses to photooxidative stress, *Pinus sylves-*

tris, 1385
Glyceraldehyde-3-phosphate dehydrogenase, chloroplast, effects of blue and red light, *Arabidopsis thaliana*, 1115
Glycine max (*see* Soybean)
Glycine soja, kinetics of nodule development, 1139
Glycophyte, halophyte and, NaCl regulation, plasma membrane H^+-ATPase gene expression, 713
Gossypium hirsutum (*see* Cotton)
Graminicide, -tolerant and -susceptible corn, acetyl-coenzyme A carboxylase inhibitors, root cell transmembrane electric potentials, 919
Granule, -bound starch synthase, role of waxy protein, pea, 1355
Gravitropism, modulation by red-absorbing form, phytochrome B, *Arabidopsis thaliana*, 15
Guard cells, phospho*enol*pyruvate carboxylase, pH/L-malate/glucose-6-phosphate interactive effects, *Vicia faba*, 1189
Gymnosperm, *Ginkgo biloba*, light-dependent chloroplast development, light-harvesting chlorophyll *a*/*b*-binding protein gene, 727

H

Halophyte, glycophyte and, NaCl regulation, plasma membrane H^+-ATPase gene expression, 713
H^+-ATPase
plasma membrane, mimicry of fusicoccin effect, controlled proteolysis in radish, 391
plasma membrane gene expression, NaCl regulation, glycophyte and halophyte, 713
Heat-shock protein, plastid-localized, wheat cDNA clone, 675
Helianthus annuus (*see* Sunflower)
Hemerocallis (*see* Daylily)
Hepta-β-glucoside, elicitor-binding proteins, plasma membrane localization, solubilization and soybean, 1173
Histone, H2A mRNA expression, DNA replication, pea root tips, 1291
Hordeum vulgare (*see* Barley)
4-Hydroxybenzoic acid, synthesis in carrot protoplasts, elicitor-induced changes, Ca^{2+} and K^+ efflux, 407
3-Hydroxylase, flavanone, cDNA clone, apple, 291
3-Hydroxy-3-methylglutaryl-coenzyme A reductase, gene expression, wounding and methyl jasmonate, *Camptotheca acuminata*, 41
3-Hydroxy-3-methylglutaryl-coenzyme A reductase, seasonal variations in rubber synthesis, *Parthenium argentatum*, 535
Hydroxyphenylethylamines, biochemical basis of resistance, tobacco callus tissue cultures, 329
Hydroxyproline, -deficient arabinogalactan protein secretion, suspension-cultured carrot cells, 115
Hydroxypyruvate reductase, gene expression, light fluence and wavelength, cucumber, 933
Hyoscyamus niger, cDNA encoding tropinone reductase II, 1465
Hypersensitivity, reaction induced by bacteria, water relation alterations, cotton, 1243

I

Ice, intracellular formation and cavitation, supercooling wood tissue, *Cornus florida*, 753
Imazaquin
acetohydroxyacid synthase inhibitors, phototoxicity, corn, 1221
-resistant *Xanthium strumarium* acetolactate synthase, lack of cross-resistance, flumetsulam and chlorimuron, 281
Imbibition, soybean embryonic axes, oxidative stress, α-tocopherol, 949
Imidazoleglycerol, -phosphate dehydratase, wheat, 733
Immunofluorescence, recognition of peroxisomes, transformed and untransformed tobacco cells, 1055
Infection
induced ortho-diphenol-*O*-methyltransferases, molecular cloning and expression, tobacco leaves, 509
thread development, five nodulation mutants, distinct phenotypes of white sweetclover, 925
Internodes, pea, xyloglucan endotransglycosylase activity, 235
Iron
deficiency, respiration of sycamore cells, 1329
-deficient *Synechococcus*, chlorophyll-protein complex, encoding by *isiA* gene, 893
Irradiances, growth, acclimation, photoinhibition and D1 protein degradation in peas, 835
Isozymes, internal and external, carbonic anhydrase, *Chlorella saccharophila*, 943

K

3-Ketoacyl-acyl carrier protein synthase III, other condensing enzymes, fatty acid synthase, spinach, 1361
2-Ketobutyrate, acetohydroxyacid synthase inhibitors, phototoxicity, corn, 1221
Ketol, -acid reductoisomerase, barley, 903
Kiwifruit
polygalacturonase gene, 669
ripening, xyloglucan endotransglycosylase, 1399

L

Laminin, 33-kDa receptor analog, *Arabidopsis* cDNA, 299
Latuca sativa (*see* Lettuce)
Leaf
Arabidopsis thaliana, alteration of β-tubulin gene expression, low-temperature exposure, 371
beet, effect of cutting, solute uptake by plasma membrane vesicles, 49
Coffea arabica, regulation, purine metabolism, 1195
pea, mitochondria, regulation of pyruvate dehydrogenase, 1431
pear, cuticle permeability to sulfuric acid, effect of cations, 251
potato, plasma membrane protein pp34, response to oligogalacturonide signals, 1393
sorghum, development at various Na/Ca salinities, kinematics and dynamics, 1107
spinach
mitochondrial metabolism during photosynthesis, 1147
xanthophyll cycle and protein turnover, high light tolerance, 1413
tobacco, molecular cloning and expression, ortho-diphenol-*O*-methyltransferases, 509
tomato, methyl jasmonate, induction of papain inhibitors, 1347
Lectins
galactose-specific, protection from freeze-thaw damage, spinach thylakoids, 59
gene, sequence of vegetative homolog, pea seed, 663
Legumes, nodules, model, regulation of nitrogenase electron allocation, 421
Lettuce
intact chloroplasts, dithiothreitol effects, nonphotochemical fluorescence quenching, 575
purification and properties, monofunctional imidazoleglycerol-phosphate dehydratase, wheat, 733
Light
blue and red, expression of nuclear genes encoding chloroplast glyceraldehyde-3-phosphate dehydrogenase, *Arabidopsis thaliana*, 1115
-dependent chloroplast development, light-harvesting chlorophyll *a*/*b*-binding protein gene, *Ginkgo biloba*, 727
-harvesting protein of photosystem system I, 24-kDa, pea cDNA clone, 1461
high tolerance, xanthophyll cycle and protein turnover, sun-acclimated spinach leaves, 1413
red and blue, stomatal responsiveness, circadian rhythms in broad bean, 399
Lightflecks, corn, concurrent measurements, oxygen and carbon dioxide exchange, 823
Lipids
plasma membrane, freezing tolerance and cold acclimation, genetic variability in *Solanum* species, 793
transfer protein, epidermis-specific transcripts, EPI12, 677
Lipoxygenase
gene responsive to methyl jasmonate, wounding, *Arabidopsis thaliana*, 1133
nitrogen-responsive, expression and accumulation patterns, soybean, 457
soluble isoforms, tomato pericarp, 1211
Lobelia dortmanna, long-distance water transport, 1369
Lophopyrum elongatum
early stages of genetic salt-stress responses, amphiploid, 257
stress-induced gene *ESI*35, 1031
Lycopersicon chilense, abscisic acid- and drought-induced cDNA, sequence of, 301
Lycopersicon esculentum (*see* Tomato)
Lycopersicon pennellii, drought-resistant, expression of drought- and abscisic acid-regulated tomato genes, 597
Lysine, highly reactive and essential residue of Rubisco, tobacco, 501

M

Maize (*see* Corn)
L-Malate, pH and glucose-6-phosphate, guard cell phospho*enol*pyruvate car-

boxylase, *Vicia faba*, 1189
Malic acid, aluminum tolerance in wheat, 695
Malus (*see* Apple)
Manganese, -superoxide dismutase, cDNA, rice, 1477
Mannitol 1-oxidoreductase, activity in celery suspension cultures, different carbon sources, relative growth rate, 1001
Medicago sativa (*see* Alfalfa)
Medicago truncatula, differential expression, glutamine synthetase gene family, 73
Megagametophytes, loblolly pine, purification and characterization, catalase, 477
Melilotus alba (*see* Sweetclover, white)
Membrane
-associated and soluble lipoxygenase isoforms, tomato pericarp, 1211
depolarization and conductance, passive proton conductance, *Chara buckelli*, 197
properties of sunflower cell microsomes, effects of boron, proton transport, 763
Mesembryanthemum crystallinum, salt stress perception, plant growth regulators, 1299
Mesophyll cells, *Zinnia elegans*, tracheary element formation, gene expression patterns, 805
Metalloendoproteases, cytochrome *c* reductase integrated processing peptidase, potato mitochondria, 615
Methyl jasmonate
3-hydroxy-3-methylglutaryl-coenzyme A reductase gene expression, wounding and, *Camptotheca acuminata*, 41
induction of papain inhibitors, tomato leaves, 1347
salicylic acid response elements and, nopaline synthase promoter, tobacco, 97
wounding and, *Arabidopsis* lipoxygenase gene, 1133
Microsomes
sphingolipid long-chain base synthesis, squash, 1421
sunflower cells, effects of boron, proton transport and membrane properties, 763
Microtubules, cortical, immunolocalization of calmodulin, calcium levels in carrot and tobacco, 543
Mitochondria
atp9 transcript, RNA editing, soybean, 1457
higher plants, covalent and noncovalent dimers, cyanide-resistant alternative oxidase protein, 845
metabolism during photosynthesis, spinach leaves, 1147
pea leaf, regulation, pyruvate dehydrogenase, 1431
potato, cytochrome *c* reductase integrated processing peptidase, metalloendoproteases, 615
Mosaic virus, coat protein gene of pepper, cDNA sequence, 1023
Mung bean, mitochondria, covalent and noncovalent dimers, cyanide-resistant alternative oxidase protein, 845
Mustard, nucleotide sequence of cDNA clone, 1-aminocyclopropane-1-carboxylate synthase, 1019
Myrosinase
Arabidopsis cDNA sequence, 671
gene families, differential expression, rape, 703

N

NADP$^+$ oxidoreductase, isoenzymes, ferredoxin, antibodies specific for radish root and leaf enzymes, 435
Naphthylphthalamic acid, single binding site, zucchini plasma membrane, 449
Nicotiana tabacum (*see* Tobacco)
Nitrate
assimilation products, mitochondrial metabolism during photosynthesis, spinach leaves, 1147
uptake in barley, apparent induction, NO_3^--selective microelectrodes, 885
Nitrate reductase, *Skeletonema costatum*, 1437
Nitrogen
fixation, regulation of nitrogenase activity, white clover, 1009
-responsive lipoxygenase, expression and accumulation patterns, soybean, 457
use by tobacco, ambient CO_2 concentration, Rubisco, 1075
Nitrogenase
electron allocation, model of regulation, legume nodules, 421
regulation of activity, current nitrogen fixation, white clover, 1009
Nodulation, five mutants of white sweetclover, distinct phenotypes, 925
Nodules
kinetics of development, *Glycine soja*, 1139
legume, model, regulation of nitrogenase electron allocation, 421
Nopaline synthase, promoter in tobacco, methyl jasmonate and salicylic acid response elements, 97
Norway spruce, cDNA clone, short-chain alcohol dehydrogenase, 1479
Nucleotides
cDNA clones, dehydrin-like protein, *Stellaria longipes*, 1029
protein sequences of 60S ribosomal protein L17, tobacco, 1027
sequence
1-aminocyclopropane-1-carboxylate synthase, mustard, 1019
α-amylase gene, *Vigna mungo*, 1459
*Arabidopsis thaliana Lhcb*4 gene, 1451
cathepsin D inhibitor protein, tomato, 1473
Chlorella vulgaris α-tubulin gene, 1467
cinnamyl alcohol dehydrogenase, *Eucalyptus*, 1447
peroxide genes, tomato, 665
precursor of Rubisco small subunit, *Pteris vittata*, 1455

O

Oat
auxin-dependent pH changes, coleoptile cell walls, null-point method, 351
coleoptiles, role of expansin, cell enlargement, 1321
purification and properties, monofunctional imidazoleglycerol-phosphate dehydratase, wheat, 733
victorin-binding proteins, density gradient study, 67
Oligogalacturonide, signals, potato leaf plasma membrane protein pp34, 1393
Oligosaccharides, signals and substrates, plant cell wall, 1
Opuntia ficus-indica, CO_2 exchange and growth, elevated CO_2, open-top chambers, 519
Orchid, pollination-induced senescence of flowers, regulation, 1-aminocyclopropane-1-carboxylate oxidase, 31
Organogenesis, five nodulation mutants, white sweetclover, distinct phenotypes, 925
Ortho-diphenol-*O*-methyltransferases, molecular cloning and expression, tobacco leaves, 509
Oryza sativa (*see* Rice)
Osmoregulation, pyrroline-5-carboxylate reductase gene, *Arabidopsis thaliana*, 771
Osmosis
molecular responses, water deficit, 1035
Porphyra columbina, floridoside, L- and D-isofloridoside, 485
response to hyperosmotic stress, changes in phosphatidylinositol metabolism, carrot cells in suspension culture, 637
Oxygen
carbon dioxide exchange and, concurrent measurements, lightflecks in maize, 823
changes in P-700 oxidation, early stages, induction of photosynthesis, 649
insensitivity of photosynthesis, bundle sheath cell conductance, C_4 species, 1183
oxidative stress, α-tocopherol content, soybean embryonic axes, 949
permeability responses, soybean nodule physical traits, 149
protection of plants from oxidative stress, overexpression, superoxide dismutase, 1067
stimulation of glutathione synthesis, *Arabidopsis thaliana* suspension cultures, 621

P

P-700, changes in oxidation, early stages, induction of photosynthesis, 649
Panicum, bundle sheath cell conductance, C_4 species, O_2 insensitivity of photosynthesis, 1183
Papain, induction of inhibitors, methyl jasmonate, tomato leaves, 1347
Paraquat
-resistant *Conyza*, developmental variability, photooxidative stress tolerance, 1097
transport in protoplasts, maize suspension cells, 963
Parthenium argentatum, seasonal variations in rubber biosynthesis, 3-hydroxy-3-methylglutaryl-coenzyme A reductase, rubber transferase, 535
Pea
cDNA clone, 24-kDa light-harvesting protein, photosystem I, 1461
chloroplasts, zinc protease EP1, Rubisco degradation, 585
cytoplasm, casein kinase II-type protein kinase, inactivation of alkaline phosphatase, 955
developing, uncoating of clathrin-coated vesicles, uncoating of ATPase, 205
internodes, xyloglucan endotransglycosylase activity, 235
leaf, mitochondria, regulation of pyruvate dehydrogenase, 1431

photoinhibition and D1 protein degradation, acclimation, different growth irradiances, 835
purification and properties, monofunctional imidazoleglycerol-phosphate dehydratase, wheat, 733
role of waxy protein, biochemical evidence, granule-bound starch synthase, 1355
root plastids, ADP/ATP translocator, 131
root tips, DNA replication-dependent histone H2A mRNA, 1291
seed, lectin gene, sequence of vegetative homolog, 663
structure and expression, chloroplast-localized porphobilinogen deaminase, PCR, 139
Pear, leaf cuticles, effect of cations, permeability to sulfuric acid, 251
Pectins
oligosaccharides as signals and substrates, plant cell wall, 1
polysaccharides, *O*-D-galacturonoyl esters, suspension-cultured plant cells, 933
Pepper, severe mosaic virus coat protein gene, cDNA sequence, 1023
Perianth, conversion into reproductive organs, ectopic expression, tobacco floral homeotic gene *NAG1*, 1041
Pericarp, tomato, membrane-associated and soluble lipoxygenase isoforms, 1211
Permeability, responses to oxygen, soybean nodule physical traits, 149
Peroxidase, soybean seed coat, high-activity and low-activity genotypes, 1061
Peroxide, nucleotide sequences of genes, tomato, 665
Peroxisomes, recognition by immunofluorescence, transformed and untransformed tobacco cells, 1055
Persea americana (*see* Avocado)
pH
auxin-dependent changes, coleoptile cell walls of corn and oat, null-point method, 351
L-malate and glucose-6-phosphate, guard cell phospho*enol*pyruvate carboxylase, *Vicia faba*, 1189
Phalaenopsis (*see* Orchid)
Phosphatidylinositol, changes in metabolism, response to hyperosmotic stress, carrot cells in suspension culture, 637
Phospho*enol*pyruvate carboxylase
cDNA sequence of spinach, 1025
Vicia faba guard cell, interactive effects of pH, L-malate and glucose-6-phosphate, 1189
Phosphoglycerate kinase, mature, sequence of, spinach chloroplasts, 1449
Photoinhibition, D1 protein degradation in peas, acclimation, different growth irradiances, 835
Photooxidation
stress, molecular responses, *Pinus sylvestris*, 1385
stress tolerance, developmental variability, paraquat-resistant *Conyza*, 1097
Photosynthesis
C_4, corn and wheat, 83
induction of, early stages, changes in P-700 oxidation, 649
mitochondrial metabolism, spinach leaves, 1147
O_2 insensitivity, bundle sheath cell conductance, C_4 species, 1183
rate limitation while under water stress, Rubisco antisense DNA, transgenic tobacco, 629
Photosystem I, 24-kDa light-harvesting protein, pea cDNA clone, 1461
Photosystem II
dark heterotrophic growth conditions, filamentous *Anabaena variabilis* ATCC 29413, 971
reaction center damage and repair, *Dunaliella salina*, 181
reaction center D1 protein, mutation of serine-264, triazine-resistant rape, 105
Phototropism, growth distribution, *Arabidopsis thaliana* seedling, 157
Phytochelatin, increased production, increased zinc tolerance, *Silene vulgaris*, 1305
Phytochrome, functions, 679
Phytochrome B, red-absorbing form, modulation of gravitropism, *Arabidopsis thaliana*, 15
Phytoene desaturase, *Arabidopsis thaliana*, 1475
Picea abies (*see* Norway spruce)
Pigments, synthesis, circadian oscillator, barley chloroplast development, 191
Pine, loblolly, megagametophytes, purification and characterization, catalase, 477
Pinus sylvestris, molecular responses, photooxidative stress, 1385
Pinus taeda (*see* Pine, loblolly)
Pisum sativa (*see* Pea)
Plant Gene Register
apple gene highly expressed in fruit, 1017
Arabidopsis cDNA sequence, myrosinase, 671
Arabidopsis thaliana cDNA, 33-kDa laminin receptor analog, 299
ascorbate peroxidase, soybean root nodules, 661
cDNA
cas17, alfalfa, 667
chloroplast fructose-1,6-bisphosphate, rapeseed, 1453
flavanone 3-hydroxylase, apple, 291
glucose transporter, sugarcane, 1469
manganese-superoxide dismutase, rice, 1477
pepper severe mosaic virus coat protein gene, 1023
short-chain alcohol dehydrogenase, Norway spruce, 1479
tropinone reductase II, *Hyoscyamus niger*, 1465
chloroplastic glutamine synthetase, rape, 303
cloning of class III acidic chitinase, chickpea, 297
Cyanidium caldarium allophycocyanin β subunit gnee, 293
differential expression of cDNA, embryogenic and nonembryogenic carrot cells, 1021
epidermis-specific transcripts, EPI12, 677
genomic nucleotide sequence of gene, protein homolog of *Escherichia coli*, *Arabidopsis thaliana*, 673
24-kDa light-harvesting protein of photosystem I, pea cDNA clone, 1461
Malus cDNA, homology to *Antirrhinum Candica*, *Zea A2* genes, 1015
nucleotide and protein sequences, 60S ribosomal protein L17, tobacco, 1027
nucleotide sequence
α-amylase gene, *Vigna mungo*, 1459
Arabidopsis thaliana Lhcb4 gene, 1451
cathepsin D inhibitor protein, tomato, 1473
Chlorella vulgaris α-tubulin gene, 1467
peroxide genes, tomato, 665
nucleotide sequence of cDNA clone
1-aminocyclopropane-1-carboxylate synthase, mustard, 1019
cinnamyl alcohol dehydrogenase, *Eucalyptus*, 1447
dehydrin-like protein, *Stellaria longipes*, 1029
precursor of Rubisco small subunit, *Pteris vittata*, 1455
phytoene desaturase, *Arabidopsis thaliana*, 1475
polygalacturonase gene from kiwifruit, 669
ripening-related polygalacturonase cDNA, avocado, 289
RNA editing, soybean mitochondrial *atp9* transcript, 1457
sequence
abscisic acid- and drought-induced cDNA, *Lycopersicon chilense*, 301
cloned tomato ubiquitin conjugating enzyme, 1471
(1–3,1–4)-β-glucanase cDNA, oat, 295
mature phosphoglycerate kinase, spinach chloroplasts, 1449
phospho*enol*pyruvate carboxylase cDNA, soybean, 1025
soybean alternative oxidase cDNA clone, 1481
vegetative homolog, pea seed lectin gene, 663
stress-induced gene *ESI35*, *Lophopyrum elongatum*, 1031
tomato fruit sucrose synthase cDNA, 1463
wheat cDNA clone, plastid-localized heat-shock protein, 675
Plasmalemma, ammonium uptake by rice roots, 1259
Plasma membrane
activation of Ca^{2+} pump, controlled proteolysis, radish, 385
-bound redox system, penetration by artificial electron acceptors, corn root, 593
calcium-requiring kinases, zucchini, 413
H^+-ATPase, mimicry of fusicoccin effect, controlled proteolysis in radish, 391
H^+-ATPase gene expression, NaCl regulation, glycophyte and halophyte, 713
lipids and genetic variability, freezing tolerance and cold acclimation, *Solanum* species, 793
-localized hepta-β-glucoside elicitor-binding proteins, solubilization, soybean, 1173
potato leaf protein pp34, response to oligogalacturonide signals, 1393
solute uptake by vesicles, effect of cutting, beet leaves, 49
zucchini, single naphthylphthalamic acid binding site, 449
Plastids
chloroplast transcription, dynamic regulation, 309
-localized heat-shock protein, wheat cDNA clone, 675
Pollen, tube and root-hair tip growth, *Ara-*

bidopsis thaliana mutant, 977
Pollination
effects of inhibitors, protein serine/threonine phosphatases, *Brassica*, 1165
-induced senescence of orchid flowers, regulation, 1-aminocyclopropane-1-carboxylate oxidase, 31
Poly(A), -binding proteins, PAB2 characterization, *Arabidopsis thaliana*, 525
Polyethylene glycol, activation of cytosolic pyruvate kinase, castor, 285
Polygalacturonase
gene in kiwifruit, 669
ripening-related, cDNA, avocado, 289
Polymerase chain reaction, structure and function in pea, chloroplast-localized porphobilinogen deaminase, 139
Polysaccharides, peptic, *O*-D-galacturonoyl esters, suspension-cultured plant cells, 933
Porphobilinogen deaminase, chloroplast-localized, PCR, pea, 139
Porphyra columbina, floridoside, L- and D-isofluoridoside, 485
Potassium, efflux and 4-hydroxybenzoic acid synthesis, elicitor-induced changes, carrot protoplasts, 407
Potato
freezing tolerance and cold acclimation, plasma membrane lipids, genetic variability, 793
functional cystatin domains, proteolysis, 85-kDa crystalline cysteine proteinase inhibitor, 1227
leaf plasma membrane protein pp34, response to oligogalacturonide signals, defense and development, 1393
mitochondria, cytochrome *c* reductase integrated processing peptidase, metalloendoproteases, 615
serine-to-threonine substitution, triazine herbicide-binding protein, atrazine resistance, 911
pp34, potato leaf plasma membrane protein, response to oligogalacturonide signals, 1393
Proline
abscisic acid and, induction of chilling tolerance, suspension-cultured maize cells, 607
-rich nodulin gene, invasion zone, *Rhizobium meliloti*-induced alfalfa root nodules, 21
Proteases, endogenous and plant, AVR9 race-specific elicitor of *Cladosporium fulvum*, tomato, 91
Protein kinase
casein kinase II-type, inactivation by alkaline phosphatase, pea cytoplasm, 955
zucchini, 413
Proteins
barley pathogenesis-related, fungal cell wall lytic activity, inhibition of yeast growth, 1277
turnover and xanthophyll cycle, high light tolerance, sun-acclimated spinach leaves, 1413
Protein serine, threonine phosphatases, effects of inhibitors, pollination in *Brassica*, 1165
Proteolysis
controlled
activation of plasma membrane Ca^{2+} pump, radish, 385
mimicry of fusicoccin effect, plasma membrane H^+-ATPase of radish, 391
development and senescence, plant gene-controlled ineffective alfalfa nodules, 379
85-kDa crystalline cysteine proteinase inhibitor, cystatin domains, potato, 1227
Proton
-induced x-ray emission, plasma membrane-bound redox system, corn root, 593
passive conductance, membrane depolarization and conductance, *Chara buckelli*, 197
transport and membrane properties, effects of boron, sunflower cell microsomes, 763
Protoplasts
carrot, elicitor-induced changes, ions and 4-hydroxybenzoic acid synthesis, 407
paraquat transport, maize suspension cells, 963
Pseudomonas, hypersensitive reaction induced by bacteria, water relation alterations, cotton, 1243
Pteris vittata, precursor of Rubisco small subunit, nucleotide sequence, cDNA clone, 1455
Purine
regulation of metabolism, intact leaves, *Coffea arabica*, 1195
separate *de novo* and salvage pools, biosynthesis of theobromine, *Coffea arabica* leaves, 1203
Pyrroline-5-carboxylate reductase, osmoregulation of gene, *Arabidopsis thaliana*, 771
Pyrus communis (*see* Pear)
Pyruvate dehydrogenase, activity in pea leaf mitochondria, 1431
Pyruvate kinase, cytosolic, activation by polyethylene glycol, castor, 285

R

Radish
activation of plasma membrane Ca^{2+} pump, controlled proteolysis, 385
albumins, enhancement of antifungal activity, wheat and barley thionins, 1311
fusicoccin mimicry, plasma membrane H^+-ATPase, controlled proteolysis, 391
root and leaf enzymes, ferredoxin-$NADP^+$ oxidoreductase isoenzymes, antibodies, 435
Rape
albumins, enhancement of antifungal activity, wheat and barley thionins, 1311
chloroplasts
glutamine synthetase, 303
sequence, fructose-1,6-bisphosphate, 1453
differential expression, myrosinase gene families, 703
random root cDNA clones, generation of expressed sequence tags, single-run partial sequencing, 359
triazine-resistant, photosystem II function, mutation of serine-264, 105
Raphanus sativus (*see* Radish)
Receptors, five nodulation mutants, white sweetclover, distinct phenotypes, 925
Reproductive organs, conversion of perianth, ectopic expression, tobacco floral homeotic *NAG1* gene, 1041
Respiration
alternative pathway, cytochrome, tobacco, 877
mitochondrial metabolism during photosynthesis, spinach leaves, 1147
regulation of pyruvate dehydrogenase activity, pea leaf mitochondria, 1431
sycamore cells, iron deficiency, 1329
Rhamnosyltransferase, its bitter flavonoid and, juvenile-specific localization and accumulation, *Citrus grandis*, 1377
Ribosomes, 60S ribosomal protein L17, nucleotide and protein sequences, tobacco, 1027
Ribulose-1,5-bisphosphate carboxylase/oxygenase
antisense DNA, rate limitation of photosynthesis under water stress, transgenic tobacco, 629
covalent modification, highly reactive and essential lysine residue, tobacco, 501
degradation, zinc protease EP1, pea chloroplasts, 585
growth and nitrogen use in tobacco, ambient CO_2 concentration, 1075
small subunit of *Pteris vittata*, nucleotide sequence, cDNA clone, 1455
synthesis, assembly and activation, differential involvement, *Arabidopsis thaliana*, 553
Rice
cDNA for manganese-superoxide dismutase, 1477
immature seed, cDNA cloning and gene expression, soluble starch synthase, 565
root, ammonium uptake, 1249, 1259
Ricinus communis (*see* Castor)
Ripening
fruit of transgenic tomato, cell wall metabolism, 429
kiwifruit, xyloglucan endotransglycosylase, 1399
-related polygalacturonase cDNA, avocado, 289
tomato fruit, cloning of arginine decarboxylase gene, 829
RNA, editing, soybean mitochondrial *atp9* transcript, 1457
RNA, messenger
chloroplast transcription, dynamic regulation, 309
early stages of genetic salt-stress responses, amphiploid, wheat and *Lophopyrum elongatum*, 257
histone H2A, DNA replication, pea root tips, 1291
hydroxypyruvate reductase gene expression, light fluence and wavelength, cucumber, 933
long-term anoxia tolerance, *Acorus calamus*, 441
Root
corn
penetration by artificial electron acceptors, plasma membrane-bound redox system, 593
transmembrane electric potentials, acetyl-coenzyme A carboxylase inhibitors, 919
transpiration, radial turgor pressure gradients, 493
transport of water and solutes, punctur-

ing of endodermis, 335
hair curling of white sweetclover, five nodulation mutants, distinct phenotypes, 925
-hair tip growth disruption, pollen tube, *Arabidopsis thaliana* mutant, 977
pea
DNA replication-dependent histone H2A mRNA, 1291
plastids, ADP/ATP translocator, 131
radish, ferredoxin-$NADP^+$ oxidoreductase isoenzymes, antibodies, 435
rape, cDNA clones, expressed sequence tags, 359
rice, ammonium uptake, 1249, 1259
soybean nodules, ascorbate peroxidase, 661
wheat
aluminum tolerance, 685, 695
induction of five genes, aluminum, 855
transpiration, radial turgor pressure gradients, 493
Rubber, biosynthesis, 3-hydroxy-3-methylglutaryl-coenzyme A reductase, *Parthenium argentatum*, 535
Rubisco (*see* Ribulose-1,5-bisphosphate carboxylase/oxygenase)
Rumex, *R. palustris*, and *R. acetosa*, flooding resistances, submergence-induced ethylene synthesis, 783

S

Salicylic acid
biosynthesis pathway, healthy and virus-inoculated tobacco, 315
cytochrome and alternative pathway respiration, tobacco, 877
response elements, nopaline synthase promoter, tobacco, 97
Salinity, Na/Ca, kinematics and dynamics, sorghum leaf development, 1107
Salix viminalis, plant viability, function of temperature stress, 125
Salt
membrane depolarization and conductance, passive proton conductance, *Chara buckelli*, 197
stress, choline synthesis, spinach, 1269
stress perception, plant growth regulators, *Mesembryanthemum crystallinum*, 1299
-stress responses, amphiploid, wheat and *Lophopyrum elongatum*, 257
Seed
Amaranthus hypochondriacus, amino acid sequence, trypsin inhibitor, 1407
castor oil, activation of cytosolic pyruvate kinase, polyethylene glycol, 285
pea, lectin gene, sequence of vegetative homolog, 663
rice, cDNA cloning and gene expression, soluble starch synthase, 565
soybean
coat peroxidase, high-activity and low-activity genotypes, 1061
purification of allantoinase, anti-allantoinase antibodies, 1235
Seedling
Arabidopsis thaliana, growth distribution during phototropism, 157
radish, activation of plasma Ca^{2+} pump, controlled proteolysis, 385
Senescence
development and, proteolysis, plant gene-controlled ineffective alfalfa nodules, 379
pollination-induced, 1-aminocyclopropane-1-carboxylate oxidase, orchid flowers, 31
Serine, -to-threonine substitution, triazine herbicide-binding protein, potato, 911
Serine-264, mutation, photosystem II function, triazine-resistant rape, 105
Serine palmitoyltransferase, sphingolipid long-chain base synthesis, squash, 1421
Shoot, *Salix viminalis*, plant viability, function of temperature stress, 125
Signaling
oligosaccharides as signals and substrates, plant cell wall, 1
regulation of cytosolic calcium, 7
Silene vulgaris, increased zinc tolerance, not due to increased phytochelatin production, 1305
Skeletonema costatum, nitrate reductase, 1437
Sodium, -calcium salinities, kinematics and dynamics, sorghum leaf development, 1107
Sodium chloride, regulation of plasma membrane H^+-ATPase gene, glycophyte and halophyte, *Atriplex nummularia* and tobacco, 713
Solanum tuberosum (*see* Potato)
Solutes
uptake by plasma membrane vesicles, effect of cutting, beet leaves, 49
water transport and, puncturing of endodermis, maize roots, 335
Sorbitol, primary carbon source, growth of embryonic callus, maize, 1339
Sorghum
bundle sheath cell conductance, C_4 species, O_2 insensitivity of photosynthesis, 1183
leaf development, kinematics and dynamics, various Na/Ca salinities, 1107
Soybean
alternative oxidase cDNA clone, sequence, 1481
embryonic axes, oxidative stress, α-tocopherol content, 949
expression and accumulation patterns, nitrogen-responsive lipoxygenase, 457
mitochondria, covalent and noncovalent dimers, cyanide-resistant alternative oxidase protein, 845
mitochondrial *atp9* transcript, RNA editing, 1457
nodule physical traits, permeability responses to oxygen, 149
protection from ultraviolet-B damage, role, flavonol glycosides and carotenoids, 741
root nodules, ascorbate peroxidase, 661
seed, purification of allantoinase, anti-allantoinase antibodies, 1235
seed coat peroxidase, high-activity and low-activity genotypes, 1061
sequence of phospho*enol*pyruvate carboxylase cDNA, 1025
solubilization, plasma membrane-localized hepta-β-glucoside elicitor-binding proteins, 1173
Sparganium emersum, long-distance water transport, 1369
Sphingolipid, long-chain base synthesis in squash, 1421
Spinach
chloroplasts
ADP/ATP translocator, pea root plastids, 131
sequence, mature phosphoglycerate kinase, 1449
choline synthesis, relation to salt stress, 1269
3-ketoacyl-acyl carrier protein synthase II, other condensing enzymes, fatty acid synthase, 1361
leaf, mitochondrial metabolism during photosynthesis, 1147
sun-acclimated leaves, xanthophyll cycle and protein turnover, high light tolerance, 1413
suspension-cultured plant cells, *O*-D-galacturonoyl esters, peptic polysaccharides, 933
thylakoids, protection from freeze-thaw damage, galactose-specific lectins, 59
Spinacia oleracea (*see* Spinach)
Squash, sphingolipid long-chain base synthesis, 1421
Starch synthase
granule-bound, role of waxy protein, pea, 1355
soluble, cDNA cloning and gene expression, immature rice seeds, 565
Stellaria longipes, nucleotide sequence of cDNA, dehydrin-like protein, 1029
Stomata, responsiveness to red and blue light, circadian rhythms, broad bean, 399
Storage proteins, role of auxin, maize endosperm development, 273
Stress, temperature, plant viability, *Salix viminalis*, 125
Submergence, -induced ethylene synthesis, flooding resistances, *Rumex palustris* and *R. acetosa*, 783
Substrates, oligosaccharides as signals and, plant cell wall, 1
Sucrose synthase, cDNA, tomato fruit, 1463
Sugar, composition, expression of acid invertase gene, tomato fruit, 863
Sugarcane, glucose transporter cDNA, 1469
Sulfuric acid, effective permeability, effect of cations, pear leaf cuticles, 251
Sunflower, cell microsomes, effects of boron, proton transport and membrane properties, 763
Superoxide dismutase
-manganese, cDNA, rice, 1477
molecular responses to photooxidative stress, *Pinus sylvestris*, 1385
overexpression, protection of plants, oxidative stress, 1067
tolerance of freezing stress, transgenic alfalfa, 1155
Sweetclover, white
five nodulation mutants, distinct phenotypes, 925
mutants temperature sensitive for chlorophyll expression, 1123
Sycamore, respiration, iron deficiency, 1329
Synechococcus
iron-deficient, chlorophyll-protein complex, encoding by *isiA* gene, 893
PsaE requirement, electron flow around photosystem I, 171

T

Temperature
cold acclimation-specific *cas17* gene, cloning and sequencing, alfalfa, 667
induction of chilling tolerance, proline and

abscisic acid relationship, suspension-cultured maize cells, 607
low
altered β-tubulin gene expression, *Arabidopsis thaliana*, 371
regulation, *Arabidopsis thaliana cor78*, 1047
protection from freeze-thaw damage, galactose-specific lectins, spinach thylakoids, 59
-sensitive mutants of sweetclover, chlorophyll expression, 1123
stress, plant viability, *Salix viminalis*, 125
Theobromine, biosynthesis, separate *de novo* and salvage purine pools, *Coffea arabica* leaves, 1203
Thionins, wheat and barley, enhancement of antifungal activity, radish and oilseed rape 2S albumins, 1311
Threonine, substitution, triazine herbicide-binding protein, potato, 911
Threonine phosphatases, protein serine, effects of inhibitors, pollination in *Brassica*, 1165
Thylakoids, spinach, protection from freeze-thaw damage, galactose-specific lectins, 59
Tobacco
ability to immunolocalize calmodulin to cortical microtubules, calcium levels, 543
callus tissue cultures, biochemical basis of resistance, hydroxyphenylethylamines, 329
class I chitinase for chitin binding, N-terminal cysteine-rich domain, 221
cytochrome and alternative pathway respiration, 877
floral homeotic gene *NAG1*, ectopic expression, conversion of perianth into reproductive organs, 1041
glycophyte and halophyte, NaCl regulation, plasma membrane H^+-ATPase gene expression, 713
growth and nitrogen use, ambient CO_2 concentration, Rubisco, 1075
healthy and virus-inoculated, pathway, salicylic acid biosynthesis, 315
leaf, molecular cloning and expression, ortho-diphenol-*O*-methyltransferases, 509
methyl jasmonate and salicylic acid response elements, nopaline synthase promoter, 97
nucleotide and protein sequences, 60S ribosomal protein L17, 1027
protection of plants from oxidative stress, overexpression, superoxide dismutase, 1067
rate limitation of photosynthesis under water stress, use of transgenic plants, Rubisco antisense DNA, 629
Rubisco, covalent modification, highly reactive and essential lysine residue, 501
transformed and untransformed cells, recognition of peroxisomes, immunofluorescence, 1055
transgenic, ectopic overexpression, asparagine synthetase, 1285
virus-inoculated, induction, benzoic acid 2-hydroxylase, 323
α-Tocopherol, content in soybean embryonic axes, oxidative stress, imbibition and germination, 949
Tomato
cloning of arginine decarboxylase gene, expression during fruit ripening, 829
drought- and abscisic acid-regulated genes, drought-resistant species, *Lycopersicon pennellii*, 597
endogenous and plant proteases, AVR9 race-specific elicitor, *Cladosporium fulvum*, 91
fruit
acid invertase gene expression, control of sugar composition, 863
sucrose synthase cDNA, 1463
leaf, methyl jasmonate, induction of papain inhibitors, 1347
nucleotide sequence
cathepsin D inhibitor protein, 1473
peroxide genes, 665
pericarp, membrane-associated and soluble lipoxygenase isoforms, 1211
transgenic, cell wall metabolism, ripening fruit, 429
ubiquitin conjugating enyzme, sequence, 1471
Tracheary element
differentiation in cultured *Zinnia* cells, molecular cloning, cDNAs, 815
formation in single mesophyll cells, gene expression patterns, *Zinnia elegans*, 805
Transpiration, radial turgor pressure gradients, wheat and maize roots, 493
Triazine
herbicide-binding protein in potato cells, serine-to-threonine substitution, potato, 911
-resistant rape, photosystem II function, mutation of serine-264, 105
Trifolium repens (*see* Clover, white)
Triticum aestivum (*see* Wheat)
Tropinone reductase II, cDNA, *Hyoscyamus niger*, 1465
Trypsin
inhibitors
amino acid sequence, *Amaranthus hypochondriacus* seed, 1407
antifungal activity of wheat and barley thionins, radish and oilseed 2S albumins, 1311
α-Tubulin, gene, nucleotide sequence, *Chlorella vulgaris*, 1467
β-Tubulin, altered gene expression, low-temperature exposure, *Arabidopsis thaliana*, 371
Turgor, pressure gradients, transpiration, wheat and maize roots, 493

U

Ubiquitin, conjugating enzyme, sequence, tomato, 1471
Ultraviolet B, protection from damage in soybean, role, flavonol glycosides and carotenoids, 741

V

Vicia faba (*see* Broad bean)
Victorin, -binding proteins, density gradient study, oat, 67
Vigna mungo, nucleotide sequence, α-amylase gene, 149
Vigna radiata (*see* Mung bean)
Virus
-inoculated tobacco
induction, benzoic acid 2-hydroxylase, 323
pathway, salicylic acid acid biosynthesis, 315

W

Water
deficit, molecular responses, 1035
drought-resistant species of *Lycopersicon pennellii*, expression, drought- and abscisic acid-regulated tomato genes, 597
relation alterations, hypersensitive reaction induced by bacteria, cotton, 1243
severe stress, crassulacean acid metabolism, *Xerosicyos*, 1089
stress, rate limitation of photosynthesis, transgenic tobacco, 629
transport of solutes and, puncturing of endodermis, maize roots, 335
Water stress, drought-induced cDNA, sequence of, *Lycopersicon chilense*, 301
Waxy protein, biochemical evidence of role, granule-bound starch synthase, pea, 1355
Wheat
aluminum tolerance, 685, 695
cDNA clone, plastid-localized heat-shock protein, 675
C_4 photosynthesis, 83
early stages of genetic salt-stress responses, amphiploid, 257
monofunctional imidazoleglycerol-phosphate dehydratase, purification and properties, 733
root
five genes induced by aluminum, 855
transpiration, radial turgor pressure gradients, 493
thionins, enhancement of antifungal activity, radish and oilseed rape 2S albumins, 1311
Wood, *Cornus florida*, supercooling tissue, intracellular ice formation and cavitation, 753
Wounding
3-hydroxy-3-methylglutaryl-coenzyme A reductase gene, methyl jasmonate and, *Camptotheca acuminata*, 41
-induced gene expression and ethylene, preclimacteric phase, avocado fruit and mesocarp discs, 227
methyl jasmonate and, *Arabidopsis* lipoxygenase gene, 1133

X

Xanthium strumarium, imazaquin-resistant, lack of cross-resistance to flumetsulam and chlorimuron, acetolactate synthase, 281
Xanthophyll, cycle and protein turnover, high light tolerance, sun-acclimated spinach leaves, 1413
Xerosicyos, crassulacean acid metabolism, severe water stress, 1089
X-ray, proton-induced emission, plasma membrane-bound redox system, corn root, 593
Xyloglucan, oligosaccharides as signals and substrates, plant cell wall, 1
Xyloglucan endotransglycosylase
activity during kiwifruit ripening, 1399
activity in carrot cell suspensions, cell elongation, somatic embryogenesis, 987
activity in pea internodes, 235

Y

Yeast, inhibition of growth, barley pathogenesis-related proteins, fungal cell wall lytic activity, 1277

Z

Zea mays (*see* Corn)
Zein, role of auxin, maize endosperm development, 273
Zinc, increased tolerance in *Silene vulgaris*, not due to increased phytochelatin production, 1305
Zinc protease, EP1, Rubisco degradation, pea chloroplasts, 585
Zinnia elegans
cultured cells, tracheary element differentiation, molecular cloning of cDNAs, 815
single mesophyll cells, tracheary element formation, gene expression patterns, 805
Zucchini
plasma membrane, single naphthylphthalamic acid binding site, 449
protein kinases, 413
